Order Status Update API Documentation (Updated)

API Endpoint:
https://glassx.imcbs.com/api/order-status/update/

Description:
This API allows authorized users to update the status of an existing order. Now includes validation with **client_id** to ensure the order belongs to the correct client.

Request Method: POST

Headers:
Content-Type: application/json
Authorization: Token <your_token_here>

Required Fields (JSON Body):
- **order_id** (integer) — ID of the order to update
- **status** (string) — pending | completed | cancelled
- **client_id** (string) — client code of the order

Example Request:
```
{
  "order_id": 12,
  "status": "completed",
  "client_id": "IMC1001"
}
```

Success Response:
```
{
  "success": true,
  "message": "Order status updated to completed."
}
```

Error Responses:
1. Missing fields:
```
{
  "success": false,
  "message": "order_id, status and client_id are required."
}
```

2. Invalid status:
```
{
  "success": false,
  "message": "Invalid status. Choose pending, completed, or cancelled."
}
```

3. Order not found for client:
```
{
  "success": false,
  "message": "Order not found for this client."
}
```

Status Options:
- pending — Order placed but not processed
- completed — Order delivered or completed

- cancelled — Order cancelled by admin or customer

Notes:
- Token authentication required
- Status is validated strictly
- Order is updated only if client_id matches the order
